

Egersund August 2013

Reference letter

We hereby confirm that MOSTOSTAL POMORZE SA successfully executed between December 2011- July 2012 prefabrication of structural steel sections for a new compressor module for the Kristin Platform in the North Sea including integration scope. (~600 tons). During realization of the project the company has demonstrated a high level of flexibility to adapt to the specific execution conditions. Work has been done in a timely manner, with maintaining continuity in accordance with the arrangements and technical documentation. Supervision of the works carried out by the contractor was held in professional way. There was order on construction site, construction materials were well stored, steel structure was secured.

MOSTOSTAL POMORZE has shown professionalism in all aspects of the project. Welding was performed according to applicable codes and standards. Quality of workshop's prefabrication and final quality of steel structures after their integration on the quay was very good, fulfilling all contractual requirements.

We would like therefore to confirm that MOSTOSTAL POMORZE SA as our contractor fully meets high quality standards and thanks to the experienced staff and competent manpower is capable to perform similar projects achieving the most favorable final results. In assessing the long-term cooperation we can certainly recommend it to other investors construction company, as the company, which has extensive knowledge and professional execution of works.
